## In the Claims:

1. (Currently Amended) A composition comprising:

a mixture consisting essentially of (1) a dried hydrophobic sol-gel functionalized with at least one arsenic-removing constituent comprising a manganese and iron mixture and (2) a solid support structure additionally functionalized with at least one arsenic removing constituent.

- 2. (Original) The composition recited in claim 1, wherein said mixture is molded, granular, or powdered.
- 3. (Original) The composition recited in claim 1, wherein said dried hydrophobic sol-gel is an aerogel or xerogel.
  - 4. (Canceled)
- 5. (Original) The composition recited in claim 1, wherein the solid support structure is granulated activated carbon (GAC).
- 6. (Original) The composition recited in claim 5, wherein the GAC is acid washed.
  - 7. (Currently Amended) A composition comprising:

a predetermined amount of a hydrophobic aerogel functionalized with at least one arsenic-removing constituent <u>comprising a manganese and iron mixture</u>; and

a predetermined amount of granulated activated carbon

functionalized with at least one arsenic removing constituent, wherein said

composition is capable of removing arsenic contaminants from aqueous media.

8. (Currently Amended) A method comprising:

providing a dried hydrophobic sol-gel on a solid support structure, wherein said dried hydrophobic sol-gel and said solid support structure are functionalized with at least one arsenic-removing constituent comprising a manganese and iron mixture;

contacting said dried hydrophobic sol-gel on a solid support structure to an aqueous sample; and

analyzing said dried hydrophobic sol-gel on said solid support structure after contacting it with said aqueous sample in order to the detect the presence and/or concentration of arsenic.

- 9. (Canceled)
- 10. (Original) The method recited in claim 8, wherein said dried hydrophobic sol-gel is a hydrophobic aerogel or hydrophobic xerogel.
  - 11. (Canceled)
- 12. (Original) The method recited in claim 8, wherein the solid support structure is granulated activated carbon (GAC).
- 13. (Original) The method recited in claim 12, wherein the GAC is acid washed.

14. (New) The method recited in claim 1, wherein said dried hydrophobic sol-gel comprises greater than 0% but less than about 20% of said mixture.
